Experience

Software Engineering Intern Jul 2026 – Sep 2026
Evara *Bengaluru, India*

- Identified through hands-on testing that thin post metadata (Instagram captions) limited semantic search on Vestron (700+ users), then designed the tagging UI/UX and added user tags as extra context in the React Native app (TypeScript), making semantic search results more accurate
- Shipped mobile-first updates to the live Vestron marketing site (React, Tailwind CSS, Framer Motion): a scroll-driven parallax hero, a dynamic island style navbar, and rebuilt feature card visuals, plus fixed hero overflow on screens under 390px
- Replaced third-party LinkedIn and X iframe embeds with native React cards, fixing mobile text truncation and dark mode and removing third-party script overhead

Freelance Video Editor Jul 2024 – Dec 2025
Independent Contractor *Remote*

- Managed freelance video editing projects using Adobe Premiere Pro and After Effects, producing content that scaled client reach to millions of views

Projects

Beacon | *MERN Stack – React, Node.js, Express, MongoDB, Firebase, Socket.IO* GitHub | Live Demo

- Architected a full-stack, role-based platform (student/teacher/admin) with 17 MongoDB models and 40+ REST endpoints, enforcing RBAC across React Router and Express middleware
- Engineered real-time infrastructure with Socket.IO supporting 4 channel types and 6+ live event types (presence, typing, seen receipts, group messaging)
- Integrated Google Gemini AI as an in-app research assistant with persistent session history, rolling conversation summarization, and automatic session cleanup
- Built a secure file upload pipeline (Cloudinary) with type/size validation, automated PDF preview generation, and path-traversal protection on downloads
- Reduced redundant API calls by building a session-prefetch and TTL-based caching layer for home-screen data, eliminating duplicate fetch loops
- Hardened the API with two-tier rate limiting and Helmet/CORS policies, and implemented hybrid auth (Firebase + MongoDB profile sync) with email-verification onboarding gates

Let's Go Phishing | *HTML, CSS, JavaScript, Python*

- Built mock phishing login pages mimicking major social platforms to demonstrate credential-harvesting techniques and raise security awareness
- Delivered a live security demo to 100+ attendees at SJU Open Day 2025, covering phishing countermeasures and safe browsing practices
- Placed runner-up among 30+ competing teams

Technical Skills

Languages: JavaScript, TypeScript, Java, HTML/CSS, SQL
Frameworks: React, Node.js, Express.js, Tailwind CSS, React Router, Socket.IO, Mongoose
Databases & Cloud: MongoDB, Firebase (Firestore, Auth), Cloudinary, AWS
Core CS: DSA (300+ LeetCode, pattern-based), DBMS, OOP
Developer Tools & APIs: Git, Postman, Vite, Google Gemini API

Education

St Joseph's University Bengaluru, India
Bachelor of Computer Applications | ***CGPA: 8.72*** *May 2023 – Apr 2026*
